Timeline

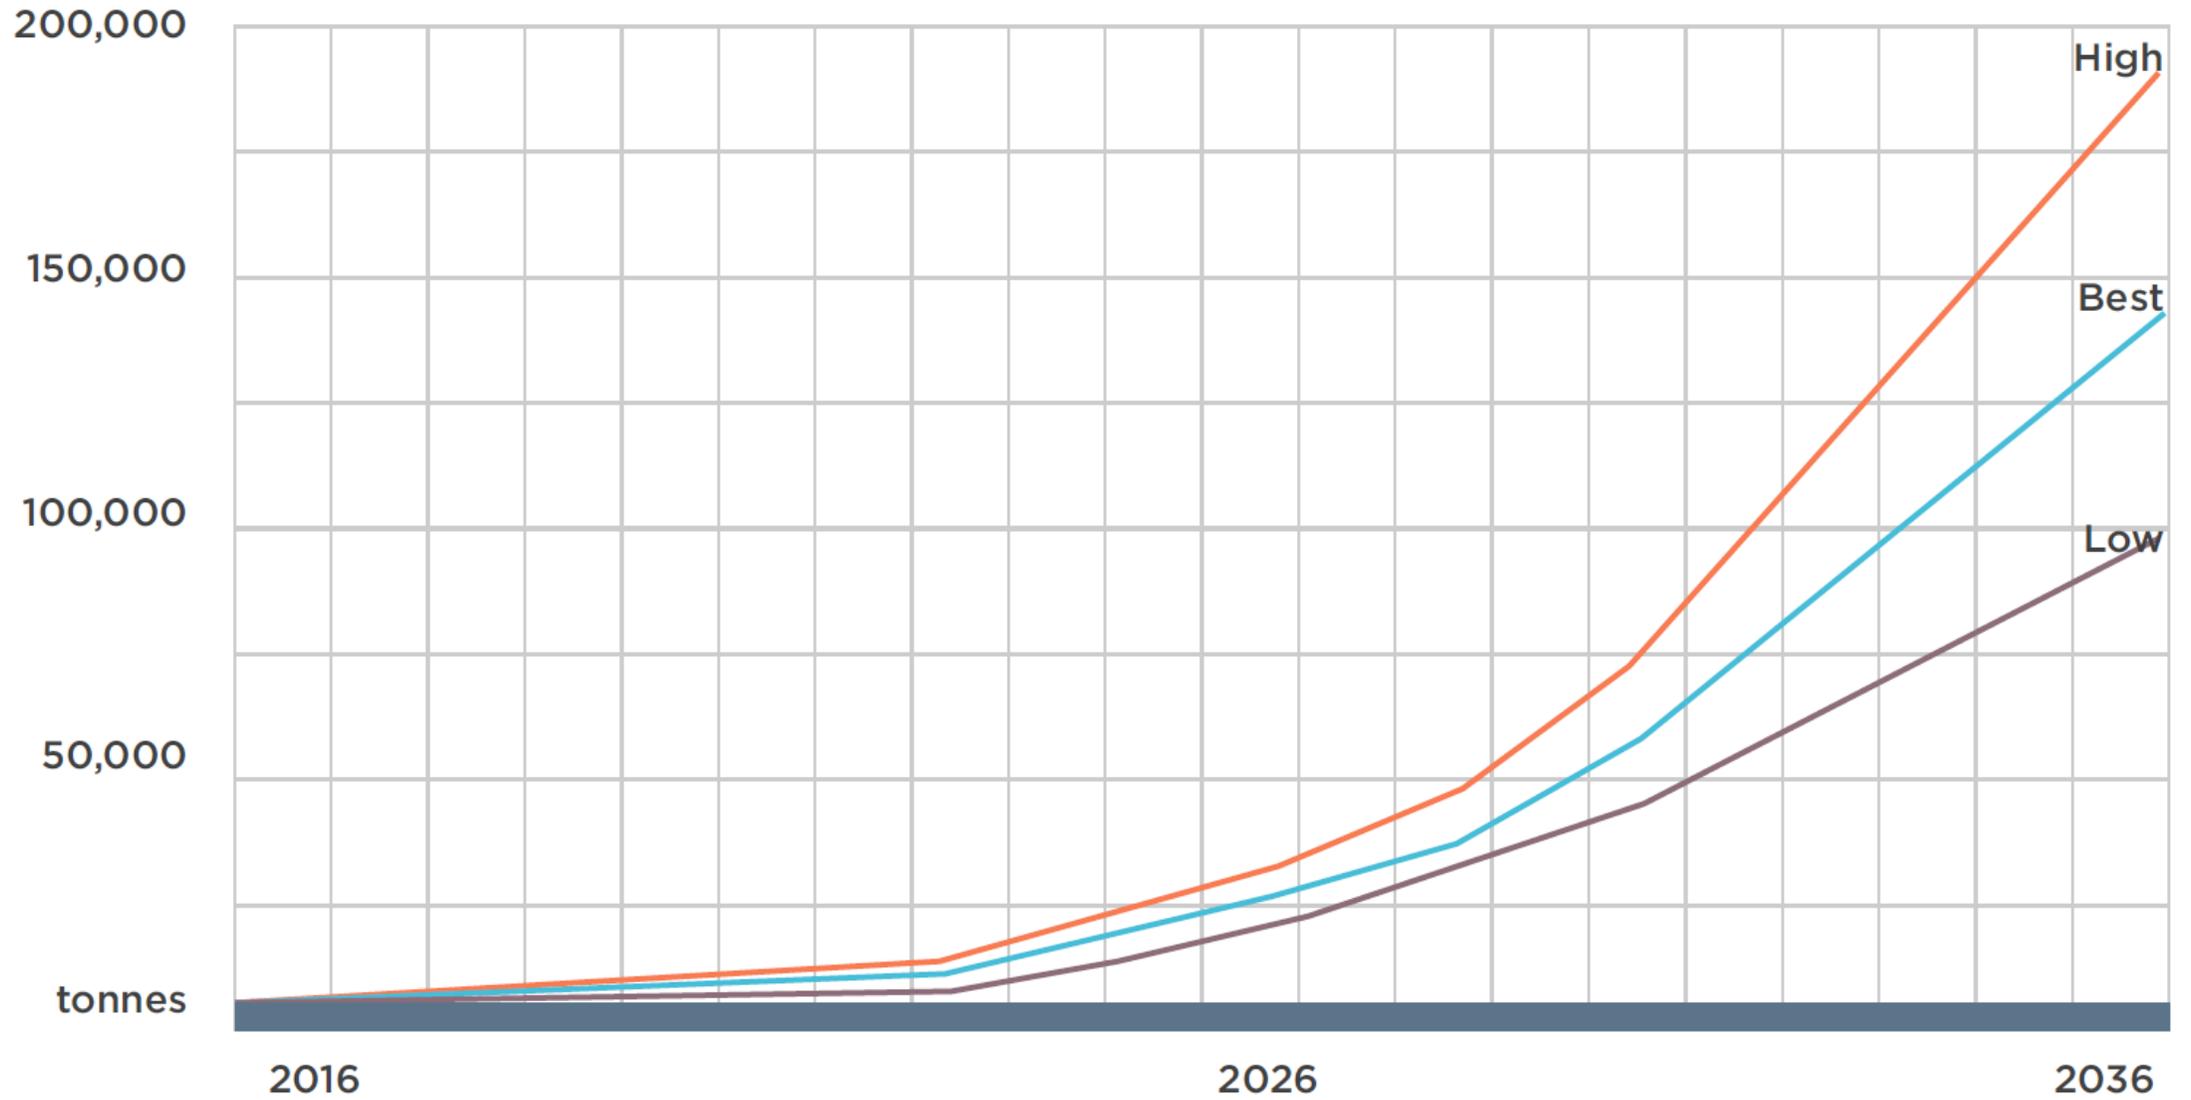

Handheld batteries reaching end-of-life

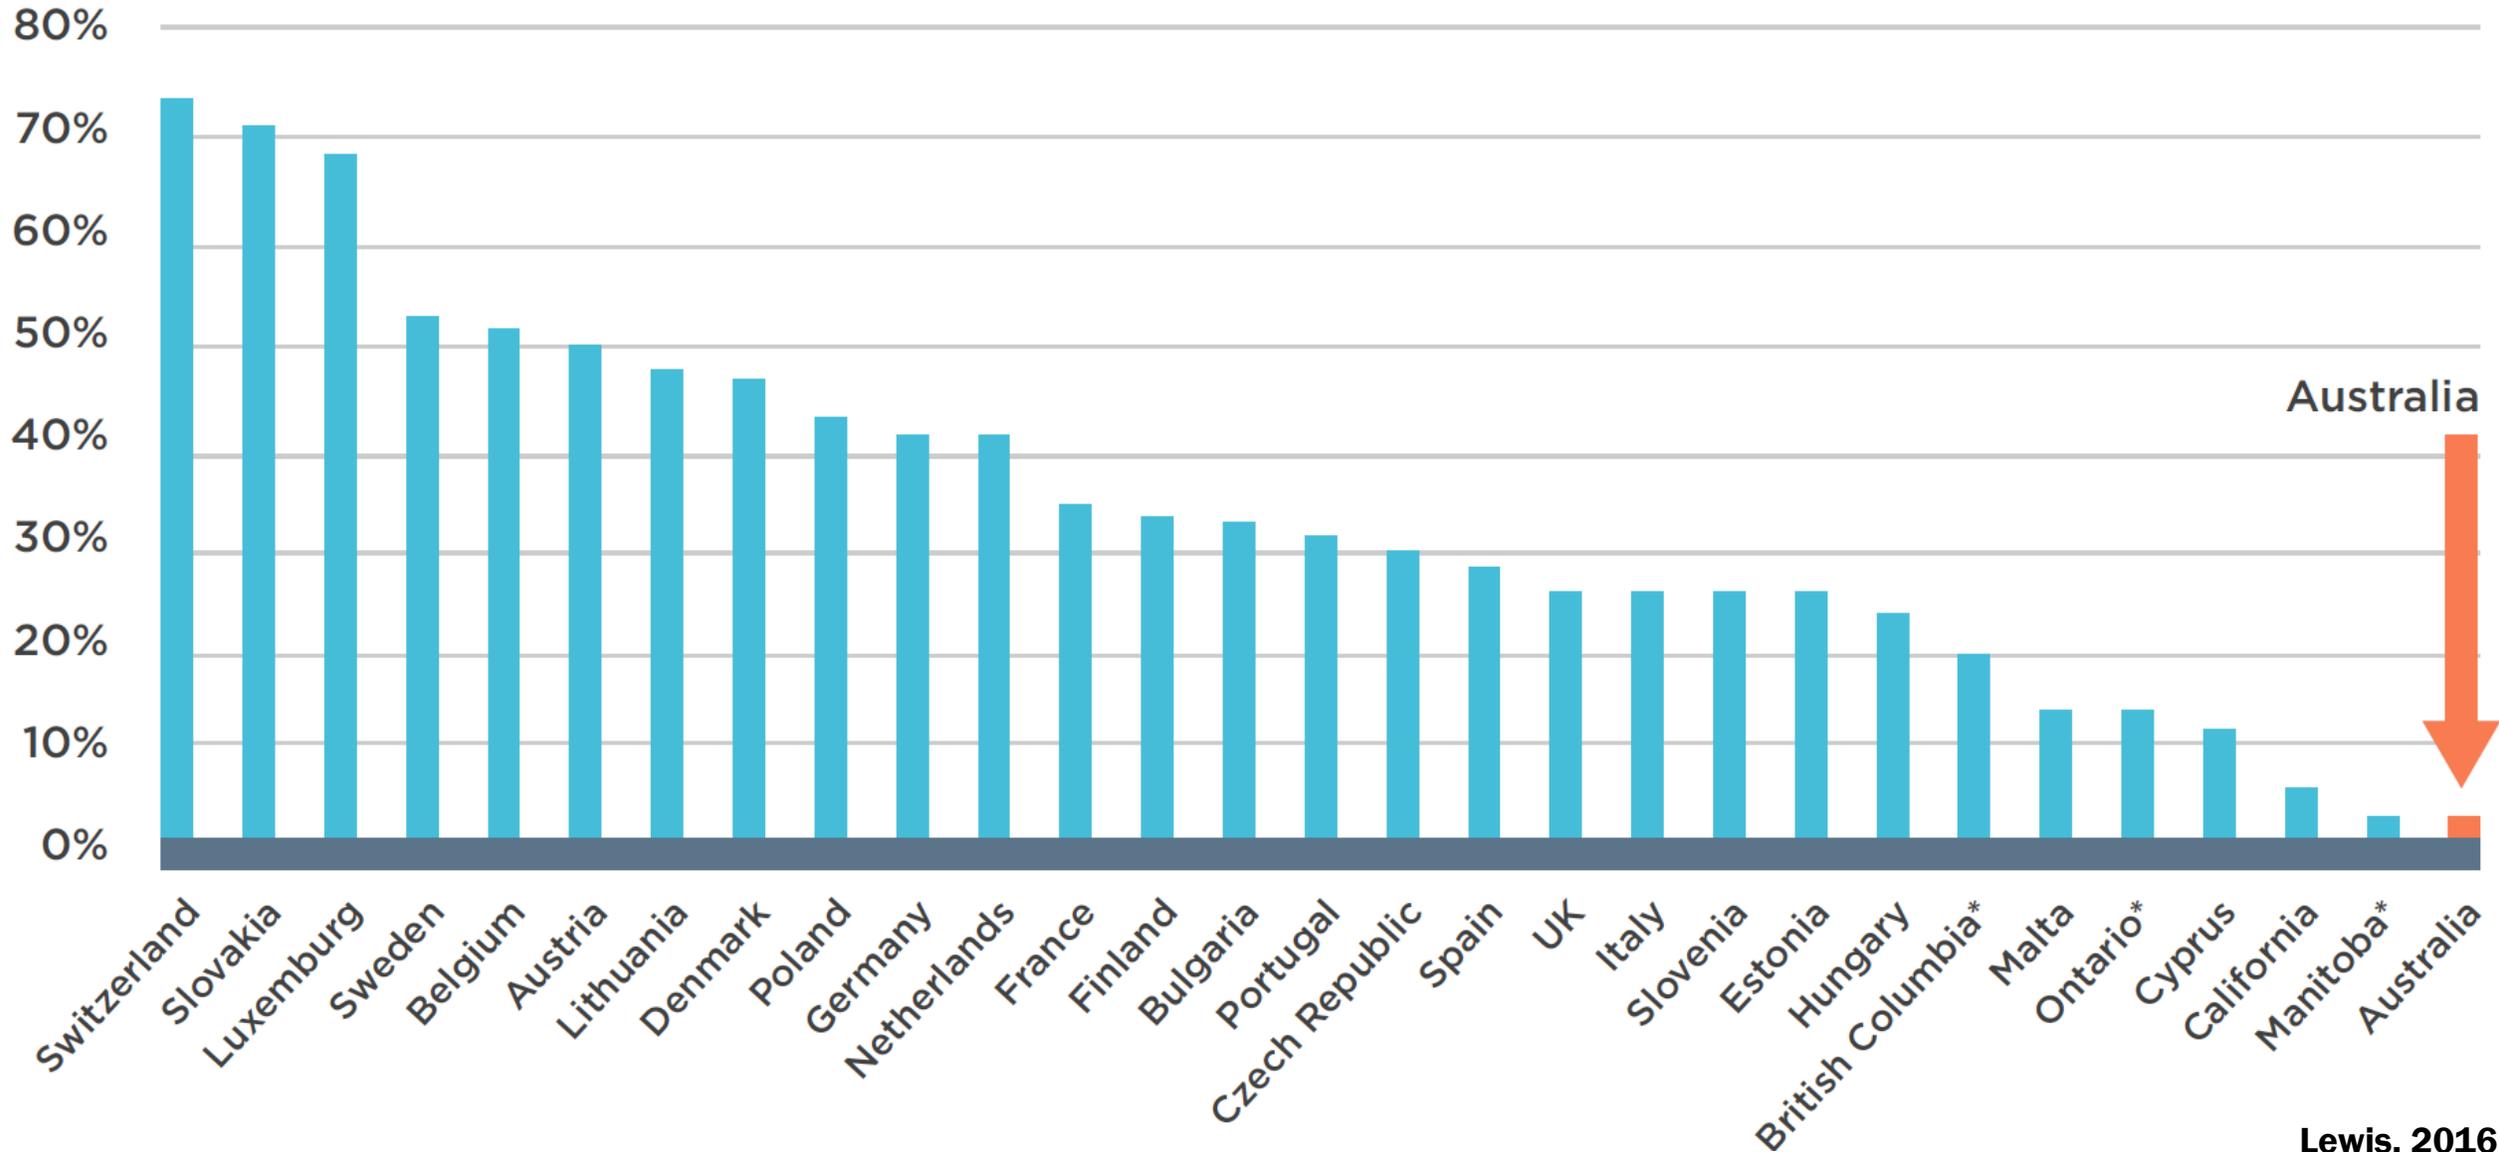

Chemistry projections, O-Farrel, Veit, & A'Vard, 2014

Exponential increase in waste battery generation

Lithium battery projections, Randell, 2016

Lets not forget why we are here

Lewis, 2016

Proposed scheme

Leveraging approach to rapid uptake of existing channels

Voluntary scheme based on shared responsibility & Govt complimentary measures

Rebate <\$7-10 kg focused on market failures

Broad scope - phasing focused on demand & market realities

Funded by a levy of \$0.04 on imports of EBU

Transparent governance & supply chain shipments

Pressure on free riders from member to member agreements

Member obligations, accreditation, & verification

Core elements to be authorised by ACCC

Overall goal to reduce current burden on communities & enable maximum flexibility and adaptability

Shared responsibility

CONSUMERS

Pay for the product, including cost of levy if passed on
Have indicated a preference for responsible management

GOVERNMENT

Funding for scaling infrastructure, ongoing burden of disposal, pro-active procurement (batteries from scheme members), regulations, & enforcement

IMPORTERS

Report imports to independent body, pay levy, implement battery standards, promote scheme to retailers & customers

RETAILERS

Purchase batteries from scheme members, ensure batteries dropped off are managed in the scheme, provide accredited drop off point if appropriate

RECYCLING CHAIN

Compliance, conformance to standards, downstream transparency & due diligence, tracking shipments, reporting: collection, sorting, recycling rates, & incidents

SCHEME

Governance, adjustment of levy & rebate, accreditation oversight, incentives, branding & marketing, industry development, performance measures & reporting
